

SECTION

10.0.0 Communication Masts, Towers and Antennas

Any radio, television or telephone masts, towers or antennae used for either sending or receiving purposes, or any similar communications mast or structure, extending more than twenty feet (20'0") above ground level, will require a Building Permit the same as for any other construction, to insure the safety of the structure or installation.

However, this does not apply to ordinary television masts or antennae used on single family dwellings or as a part of a new installation for which a regular Building Permit is obtained and includes the new installation on the Permit drawings.
